DEVOPS & SYSTEMS ENGINEER

Professional Summary

DevOps and Systems Engineer with 2+ years of experience operating production Linux infrastructure and containerized workloads. Builds tested CI/CD pipelines, Kubernetes labs, infrastructure as code, observability stacks, and operational automation using GitHub Actions, Terraform, Ansible, Bash, Python, and PowerShell.

Professional Experience

Government Authority for Electronic Certification (AGCE)

Aug 2025 - Present

Systems Security Engineer

Algiers, Algeria

- PKI: Support national electronic-certification infrastructure serving government institutions.
- Server and identity operations: Administer Windows and Linux servers, Active Directory Domain Services, DNS, Group Policy, and domain-controller replication.
- Virtualization and hardware: Operate VMware vSphere/ESXi and Hyper-V environments; manage physical-server health through Dell iDRAC.
- Security operations: Apply infrastructure security policies and support monitoring across enterprise security controls.
- Backup and storage: Monitor backup and storage operations using Dell EMC NetWorker, Data Domain, and Unity.
- Automation: Build PowerShell and API-based health checks, audits, and operational reports.

Shabakett Core

Aug 2024 - Aug 2025

System Administrator & IT Operations Specialist

Algiers, Algeria

- Linux operations: Administered production Linux servers, including deployment, configuration, performance monitoring, and incident troubleshooting.
- Containers: Deployed and operated Docker-based applications in Linux environments.
- Security and monitoring: Configured host firewalls, performed security reviews, and monitored system availability and resource use.
- Resilience: Automated encrypted backups and failure alerts, and maintained recovery procedures and technical documentation.

Education

2023 Master's degree (MSc), Information Systems and Software Engineering, University of Bouira, Algeria

2021 Licence (Bachelor's degree), Information Systems and Software Engineering, University of Bouira, Algeria

Certifications

2025 CompTIA Security+, CompTIA

2025 ISO/IEC 27001:2022 Lead Auditor, Mastermind Assurance

2025 Fortinet Certified Associate Cybersecurity, Fortinet

2025 Fortinet FortiGate 7.4 Operator, Fortinet

Technical Skills

Delivery and IaC	GitHub Actions, Terraform, Ansible, Helm, Kustomize, Make, Git
Containers and orchestration	Docker, Docker Compose, Kubernetes, kubectl, Kind, Argo CD, Cilium
Cloud and virtualization	GCP, AWS, VMware vSphere/ESXi, Hyper-V, libvirt
Observability and SRE	Prometheus, Grafana, Wazuh, Telegraf, InfluxDB, SLOs, alerting, runbooks
Systems and scripting	Linux, Windows Server, Bash, Python, Go, PowerShell, REST APIs

Portfolio | GitHub | LinkedIn

DEVOPS & SYSTEMS ENGINEER

Selected Projects

Secure Kubernetes Platform

Kubernetes, Argo CD, Helm, Kyverno, Cilium, cert-manager, Prometheus, GitHub Actions

- Built a reproducible Kind platform with GitOps delivery, restricted Pod Security Admission, digest-pinned images, resource policies, default-deny networking, TLS, HPA, and PDB controls.
- Evidence: current CI creates the cluster, bootstraps the platform, confirms certificate readiness and Argo CD health, and verifies admission rejection.

Kubernetes SRE Lab

Kubernetes, Go, PostgreSQL, Redis, Prometheus, Helm, Cilium, GitHub Actions

- Implemented a failure-driven lab with availability and latency objectives, burn-rate alerts, probes, HPA, PDB, NetworkPolicies, runbooks, and controlled fault scripts.
- Evidence: current CI deploys the stack to Kind and passes an in-cluster readiness smoke test; long-duration SLO attainment is not claimed.

Kubernetes High-Availability Lab

Kubernetes, kubeadm, Terraform, libvirt, Ansible, HAProxy, Keepalived, Cilium

- Defined a six-VM topology with three stacked-etcd control-plane nodes, three workers, and a floating API endpoint generated from Terraform into Ansible inventory.
- Evidence boundary: configuration passes static CI validation; live VIP failover, etcd quorum, and recovery evidence remain pending.

Containerized Observability API

Python, Flask, Docker, Prometheus, Grafana, pytest, GitHub Actions

- Built a non-root Flask metrics service with Prometheus collection, an auto-provisioned Grafana dashboard, alert rules, health checks, and 17 automated API tests.
- CI lints, tests, and builds the image; deployment runs only for a successful CI commit and verifies the live health endpoint after rollout.

Automated SIEM Lab on GCP

GCP, Terraform, Ansible, Wazuh, Docker Compose, MITRE ATT&CK, GitHub Actions

- Provisioned a four-VM, segmented GCP lab and automated Wazuh server and multi-OS agent configuration with reusable infrastructure and configuration code.
- Executed seven controlled attack simulations and documented Wazuh alert evidence; current CI validates Terraform and Ansible syntax/linting.
