## SYSTEMS & CYBERSECURITY ENGINEER

### Professional Summary

Systems and Cybersecurity Engineer with 2+ years of experience administering and hardening Linux and Windows infrastructure. Supports national PKI services, Active Directory, virtualization, SIEM, network security, backup operations, and compliance automation. CompTIA Security+ and ISO/IEC 27001 Lead Auditor certified.

### Professional Experience

#### Government Authority for Electronic Certification (AGCE)

Aug 2025 - Present

Systems Security Engineer

Algiers, Algeria

- PKI: Support national electronic-certification infrastructure serving government institutions.
- Server and identity operations: Administer Windows and Linux servers, Active Directory Domain Services, DNS, Group Policy, and domain-controller replication.
- Virtualization and hardware: Operate VMware vSphere/ESXi and Hyper-V environments; manage physical-server health through Dell iDRAC.
- Security operations: Apply infrastructure security policies and support monitoring across enterprise security controls.
- Backup and storage: Monitor backup and storage operations using Dell EMC NetWorker, Data Domain, and Unity.
- Automation: Build PowerShell and API-based health checks, audits, and operational reports.

#### Shabakett Core

Aug 2024 - Aug 2025

System Administrator & IT Operations Specialist

Algiers, Algeria

- Linux operations: Administered production Linux servers, including deployment, configuration, performance monitoring, and incident troubleshooting.
- Containers: Deployed and operated Docker-based applications in Linux environments.
- Security and monitoring: Configured host firewalls, performed security reviews, and monitored system availability and resource use.
- Resilience: Automated encrypted backups and failure alerts, and maintained recovery procedures and technical documentation.

### Education

2023 Master's degree (MSc), Information Systems and Software Engineering, University of Bouira, Algeria

2021 Licence (Bachelor's degree), Information Systems and Software Engineering, University of Bouira, Algeria

### Certifications

2025 CompTIA Security+, CompTIA

2025 ISO/IEC 27001:2022 Lead Auditor, Mastermind Assurance

2025 Fortinet Certified Associate Cybersecurity, Fortinet

2025 Fortinet FortiGate 7.4 Operator, Fortinet

### Technical Skills

|                       |                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------|
| Security operations   | FortiSIEM, Wazuh SIEM/XDR, log analysis, FIM, MITRE ATT&CK, endpoint and infrastructure monitoring |
| PKI and compliance    | CA operations, AD CS, ISO/IEC 27001 auditing, risk assessment, policy implementation, hardening    |
| Network security      | FortiGate, pfSense, Cloudflare WAF, Nginx, SSH hardening, firewall administration                  |
| Systems and platforms | Linux, Windows Server, AD DS, DNS, Group Policy, vSphere/ESXi, Hyper-V, iDRAC                      |
| Automation and cloud  | PowerShell, Bash, Python, REST APIs, Terraform, Ansible, GCP, AWS, Kubernetes                      |

## SYSTEMS & CYBERSECURITY ENGINEER

### Selected Projects

---

#### SentinelAWS - Automated Cloud Defense

AWS, Terraform, GuardDuty, Security Hub, WAF, KMS, Lambda, EventBridge, GitHub Actions

- Designed a defense-in-depth three-tier architecture with private compute/database tiers, audit logging, detection services, and bounded EC2/WAF containment automation.
- Evidence boundary: source validation and automated tests pass; account-specific deployment and incident-response evidence remain pending.

#### Automated SIEM Lab on GCP

GCP, Terraform, Ansible, Wazuh, Docker Compose, MITRE ATT&CK, GitHub Actions

- Provisioned a four-VM, segmented GCP lab and automated Wazuh server and multi-OS agent configuration with reusable infrastructure and configuration code.
- Executed seven controlled attack simulations and documented Wazuh alert evidence; current CI validates Terraform and Ansible syntax/linting.

#### Secure Kubernetes Platform

Kubernetes, Argo CD, Helm, Kyverno, Cilium, cert-manager, Prometheus, GitHub Actions

- Built a reproducible Kind platform with GitOps delivery, restricted Pod Security Admission, digest-pinned images, resource policies, default-deny networking, TLS, HPA, and PDB controls.
- Evidence: current CI creates the cluster, bootstraps the platform, confirms certificate readiness and Argo CD health, and verifies admission rejection.

#### Kubernetes SRE Lab

Kubernetes, Go, PostgreSQL, Redis, Prometheus, Helm, Cilium, GitHub Actions

- Implemented a failure-driven lab with availability and latency objectives, burn-rate alerts, probes, HPA, PDB, NetworkPolicies, runbooks, and controlled fault scripts.
- Evidence: current CI deploys the stack to Kind and passes an in-cluster readiness smoke test; long-duration SLO attainment is not claimed.

#### Compliance and Infrastructure Auditing Suite

PowerShell, REST APIs, Active Directory, Dell iDRAC, Dell EMC NetWorker, NTP

- Automated account, time-synchronization, backup-job, and server-hardware checks across enterprise infrastructure.
- Generated consolidated operational reports while keeping environment-specific code and data private.
